Track anything, anytime, anywhere

A woman with short brown hair, wearing a dark blue suit jacket and a headset with a microphone, is shown in profile, looking upwards and to the left. She appears to be in a warehouse or logistics center, with blurred shelves of cardboard boxes in the background. The lighting is soft and focused on her face.

Track valuable packages every step of the way
for complete peace of mind.

Know more about your packages than ever before with Seabourne Pack-Track

Just being able to track something wherever it is in the world and see where it moves in real time seemed beyond everyone's reach only a few years ago. Today that seems straightforward, using GPS trackers which are able to switch to land based systems using mobile phone masts - provides pretty much global cover. Seabourne Pack-Track can track camels in the Gulf, film rushes in Namibia, daily deliveries across the Atlantic and Amazon orders cross-border in Europe.

But clients have responded with a whole set of additional challenges; in pharmaceuticals regulations require temperature sensing; in electronics, humidity can be critical and everyone demands security.

Seabourne Pack-Track can detect temperature, humidity, pressure, light levels and even acceleration. Simply using the light sensor, it shows where a package had been opened on its journey - hopefully when it's in the customer's hand.

Big data & leading edge GPS technology combined
in a revolutionary design.

Why Seabourne Pack-Track?

GPS and LBS technology

The latest GPS and LBS (Land Based Services) technology take Pack-Track products beyond the traditional point-to-point track and trace solutions.

Configurable alerts

Parameters and email alerts are configurable via the web portal for events such as breach of temperature range or shock levels, to accurately track delivery.

High resolution accuracy

High resolution with an accuracy of up to 6 metres, our products offers real-time tracking and sending anywhere in the world.

Intuitive web portal

The Pack-Track web portal shows tracking history, current location and environmental data of shipments enabling full tracing capability.

Affordable

Our low cost GPS tracking solutions enable you to protect important assets for complete peace of mind with no monthly fee.

No infrastructure required

Effortlessly track your packages with no additional infrastructure or maintenance required.

Easily track your packages throughout your distribution network.

Benefits of Pack-Track

POSITION - Track the current location of your shipment in real-time with an accuracy of up to 6 metres.

LIGHT EXPOSURE * - Identify if a package has been opened with a light exposure reading.

TEMPERATURE * - Receive an alert if there has been a breach of a pre-defined temperature range on the shipment.

HUMIDITY * - Prevent waste of goods due to humidity with the humidity sensor.

PRESSURE * - Track the pressure levels within your shipment and receive alerts if a pre-defined range is breached.

SHOCK * - Quickly establish if your package has been dropped or damaged using our shock sensor technology.

AIRPLANE MODE * - Based on the pressure sensor the device recognizes transport by airplane.

LONG BATTERY LIFE - The device is capable of 15+ days battery life and available in single-use or rechargeable options.

This leading edge technology and revolutionary design allow you to track anything in real-time, anywhere in the world, straight from the web.

How to use Pack-Track

Step 1:
Order Pack-Track at
Seabourne.

Step 2:
Charge 24h.

Step 3:
Login to your
account.

Step 4:
Set alarms.

Step 5:
Start Pack-Track and add
it to the package.

Step 6:
Track & trace your
shipment.

Lite

The Lite range is designed to be an easy-to-use solution at a low all-inclusive price. Designed for environments where only tracking is required and available in single-use or reusable versions.

Ultra

The Ultra range gives location and sensor based logistics for your shipment in real-time, anywhere in the world, straight from the web. Parameters and alerts may be customised by you to suit individual needs. Available in single-use or reusable versions.

Profiles:

	1	365
15D Lite	TS1-15D-L	TS365-15D-L
15D Ultra	TS1-15D-U	TS365-15D-U
42D Lite	TS1-42D-L	TS365-42D-L
42D Ultra	TS1-42D-U	TS365-42D-U

Seabourne offers a range of fixed profiles where 15 days (air, road) or 42 days (sea) of monitoring can be set. For example: TS1-42D-L means single-use with a set-up for 42 days of monitoring tracking only. TS365-15D-U means multi-use with a set-up for 15 days of monitoring tracking, temperature, air pressure light and shock.

Specifications of Lite & Ultra:

- Length mm: 125
- Width mm: 65
- Height mm: 15
- Weight gr: 80
- Position: 22 satellite channels
- Communication: GPS and GSM network
- Battery: 3.7V 1200 mA
- Measuring range: -40°C to + 85°C
- Accuracy: +-1°C

Lost shipments can cost your company a fortune each year. Seabourne Pack-Track contributes to prevent these losses.

Pack-Track is distributed by Seabourne in coöperation with Praxas and Trackersense. Praxas supplies means of protection and control thereby striving to create the safest possible distribution chain to prevent goods being wasted. Bringing risk and solution together demands general risk consciousness throughout the distribution chain. Praxas innovatively contributes to this. Thanks to its years of experience in various sectors it had acquired ample experience in the field of quality control and retention.
